

Mission Critical Care

The difference between **Project Survival** and **Enterprise Success**

is CNSI's state-of-the-art Enterprise Project Management Office (EPMO) solution that combines a unique set of project management services with our proven project management collaboration system, As-One. projectMedic™ allows you to establish your EPMO processes, leverage ANSI/EIA-748 for EVMS, manage your portfolios, and monitor the health of your project and portfolio.

Establishing an EPMO within your organization provides a solid foundation for the successful execution of your organization's mission and objectives. Using our unique approach that combines best practices, lessons learned, checklists, measurement, and collaboration to establish a solid set of *real world processes* for your organization, we help you establish your EPMO to foster and maintain consistent project management excellence throughout your organization.

projectMedic™, powered by As-One, is uniquely qualified to help you:

- Connect your project execution environment to your portfolio decision making processes;
- Establish a project management center of excellence that will develop/acquire, implement, disseminate, continuously improve and apply project management knowledge and standard project management processes and tools for projects across the organization;
- Improve the project evaluation, review, and reporting process (provide direct support to projects to assess a current and correct picture of project health, improve the mechanisms to identify problems and issues on projects, improve the project review and reporting process);
- Improve savings on projects and eliminate project overruns;
- Provide project management training and indoctrination throughout your entire organization;
- Provide project management consulting and mentoring (internally and externally); and
- Promote Project Management Institute's Project Management Professional (PMP) certification.

YOU COULD BE A CANDIDATE FOR
projectMedic

if you don't have answers to one or more of the following questions:

- Will your products be delivered on time and within budget?
How do you know?
- Will your products meet customer requirements and quality expectations?
How do you know?
- How good will your product be (defects found after delivery)?
How do you know?
- Is your project team adequately trained to do the job? Do you have the right skill mix and levels? Do they have the necessary processes, tools, and reference information to get the job done?
How do you know?
- What are your key constraints, risks, dependencies, issues?
How do you know?
- How satisfied are your customers?
How do you know?

CNSI's projectMedic™ supports your mission, with critical care and a customized approach tailored to your enterprise. For more information, visit us at www.cns-inc.com or call **888-234-2674, x4641**.

Processes and tools alone are not sufficient for a successful EPMO-based organization. Equally important is the culture and reward system in your organization. Our team will tune the tools and processes to your culture and reward system ensuring your success years after our engagement. We will also help you establish a culture where project management is a key tenet towards meeting your organization's mission and objectives. At CNSI, we understand that project performance monitoring is the key to providing timely information to project managers and senior management regarding the health of projects and your entire organization. As your partner, we will help you cultivate your EPMO to establish, implement, and oversee the detailed project management processes and procedures that meet your organization's business objectives and rules.

ONE INTEGRATED PROJECT MANAGEMENT SOLUTION, CUSTOMIZED FOR YOUR ENTERPRISE

As-One, CNSI's project management and collaboration system, plays a central role in monitoring project performance and reporting the performance measures back to management to foster prompt and accurate decision making. A successful EPMO starts with IT Governance, the organizational practice of governing IT projects to ensure they support and are in alignment with corporate missions. We help your senior management establish and communicate the business objectives and rules by which projects should be selected, staffed, planned, and managed across the entire organization.

As-One is built on a foundation of four cornerstones: Project Management, Process Improvement, Knowledge Management, and Team Collaboration. With As-One, you can collaborate in a structured environment, manage projects throughout their life cycle, establish repeatable environment under SW-CMM, CMMI, and PMBOK, and capture best practices and lessons learned.
