

NEXT GENERATION MODULAR MEDICAID PLATFORM

What is evoBrix®?

evoBrix® is CNSI's Next Generation Modular Medicaid Platform that supports each State's Medicaid Enterprise needs. The evoBrix® platform enables:

- **Tenant specific Configuration and Customization**
- **Reusable Business Functions**
- **Flexible Procurement and Implementation**
- **Utilization of a CMS-certified and federally compliant solution**

evoBrix® uses a comprehensive set of fully integrated functional modules built on a highly scalable technical architecture aligned to MITA conditions and standards. The technical architecture is:

- **Rules-Driven**
- **Service-Oriented**
- **Web-based**
- **COTS Integrated**

Why evoBrix®?

With states under tremendous pressure to modernize and develop more effective Medicaid IT systems that align with the Centers for Medicare and Medicaid (CMS) modularity mandate, agencies are looking to streamline infrastructure while reducing implementation cost, time, and risk.

As a cloud-based platform, **evoBrix®** is already being leveraged in the States of Michigan and Illinois. The scalable platform is optimized to deliver high performance for meeting the current and future medicaid enterprise demands. By taking advantage of a proven, shared infrastructure, States can deploy this cutting-edge Medicaid system while saving time and money over a traditional MMIS procurement.

How does evoBrix® Work?

Building from its foundation, the CNSI evoBrix® Solution offers eight modules of functionality, which allow for unique customization, reusable business functions, and continuous improvement. These modules can be implemented separately or in combination to support a State's need for integrated functionality. These modules and the CNSI solutions that support them are described below.

Provider Management Module

An integrated and comprehensive solution for enrolling and managing provider information

Consumer Engagement Module

A member-centric portal that acts as a bridge between payers and healthcare beneficiaries

Medicaid Eligibility Module

A cloud-based eligibility solution that helps states address requirements for expanded coverage acquisition and gives access to a range of healthcare programs

Core Claims and Managed Care Module

A fully services-oriented module that is designed and tuned specifically to meet the volume and performance requirements of large-scale claims processing applications

Compliance Tracking Module

A flexible and robust platform that ensures value-based care through transparency, accountability and smart analytics

Electronic Health Record (EHR) Incentive Module

A comprehensive and configurable solution that measures and demonstrates EHR outcomes as outlined by CMS guidelines

Medicaid Analytics Module

A robust framework to extract, analyze and report data from diverse medicaid business processes

Add-on Module

Additional options that provide an integrated solution to increase the value of the application and systems including document management, reports, call center, IVR and correspondence management
