

MyHealthButton And MyHealthPortal Launch In Michigan

CNSI is proud to announce the launch of an interactive mobile application, myHealthButton (myHB), and online portal, myHealthPortal (myHP), designed to promote connectivity between patients and providers. We worked with the Michigan Department of Community Health (MDCH) to create an app that allows patients to access their medical information remotely in a real-time environment. CNSI partnered with the Bureau of Medicaid Operations within MDCH's Medical Services Administration to design, build and develop this first-of-its-kind Medicaid technology.

We are excited to provide our citizens with one-stop access to their health records through these innovative solutions," said Nick Lyon, director of the MDCH. "As we work with our residents to promote better self-awareness and responsibility for their health status, these tools allow users to easily access and track important health measures right on their smartphones."

The core objective of these frontline tools is to give the Michigan Medicaid population the resources needed to better manage their own health. Both myHB and myHP put health care benefits and services directly into the hands of members served by the MDCH. By using a connected infrastructure, health care companies are able to more efficiently gather and organize data in order to produce more informed decisions and diagnoses for patients along with better quality care.

"CNSI has developed a cutting-edge solution to encourage health self-management for the Medicaid population," said CNSI Midwest Region Senior Vice President Sharif Hussein. "Our

partnership with Michigan has allowed us to meet our primary goals to improve health care delivery and we are proud to have reached this groundbreaking milestone.”

These applications will give members access to a variety of important features, including digital images of their mihealth cards, provider search capabilities, and authorized diagnoses and provider listings for Children’s Special Health Care Service beneficiaries. Both applications are currently available for Apple and Android mobile devices through the App Store and Google Play, respectively.

“Meeting the demands of an ever-increasing technology-driven society is a top priority for state government,” said Department of Technology, Management and Budget Director David Behen. “This innovative approach to providing Michigan residents with easy access to their own personal information is a great example of utilizing technology to meet those needs.”

As the first applications available on the new MILogin system, myHB and myHP are supported by Michigan’s Department of Technology, Management and Budget. Due to this partnership, the platforms include some of the unique features the MILogin system has to offer, including software that ensures protected health information on the applications remains secure and confidential.

“We have been working with the state of Michigan for many years and are excited to continue to provide cutting-edge solutions that will help the people of Michigan better manage their health,” added CNSI President Adnan Ahmed.

The myHP and myHB applications are available to current members enrolled with the Michigan Medicaid program, Children’s Special Healthcare Services program and/or the MiChild program.

What do you think about the launch of our new apps? How do you

see mobile technology affecting public health in the future?
